Keytouch IEC 60945 approved Joystick Panel
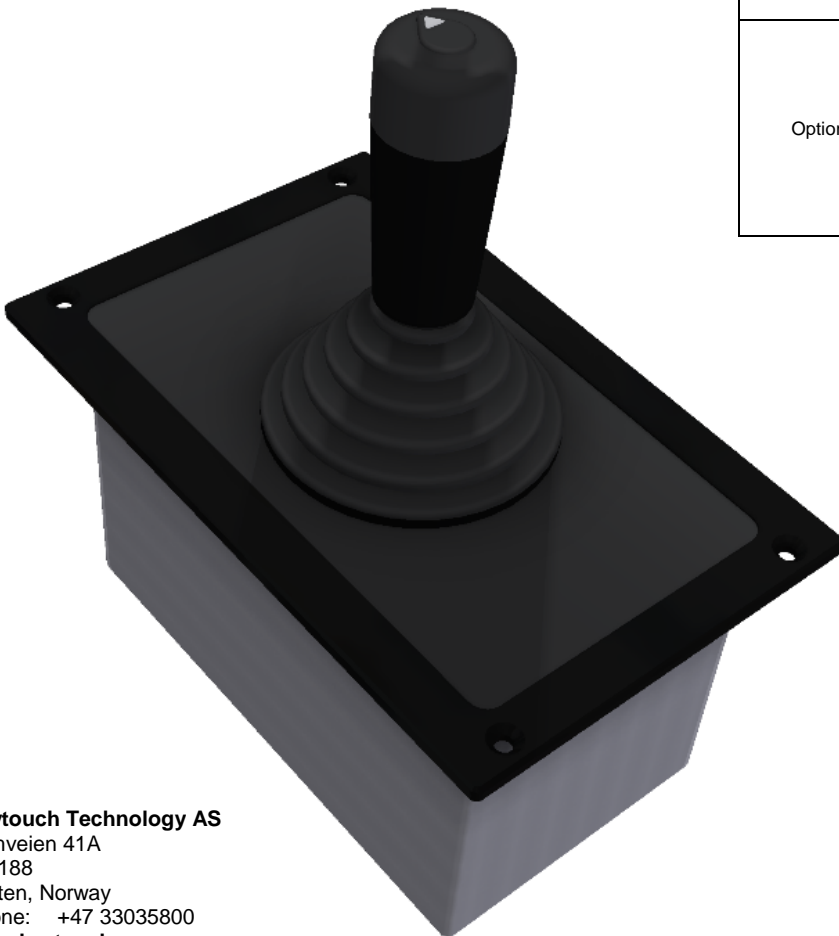

The Keytouch standardpanel series has been developed to meet the specific need and demand of the maritime market.

The joystick can be a standalone unit or can be utilized with other Keytouch units.

It is a 3-axis joystick and offers functions like put-and-stay with a button on top. Alternative joysticks from the same series with other options can be used.

The Keytouch Joystick panel can be adapted to meet individual OEM customer color, logo and design requirements.

|

Installation

Mechanical
The panel is designed as a drop-in-panel, which requires a cutout in the console and 4x countersunk M4 screws.

Connections
The panel comes with a cable, USB type A connector.

Device driver
The keyboard and trackball are USB HID interface compatible and there is no need for a special device driver. It will appear in OS as a gaming device.
